DUTIES calebsargeant.com/downloads/Caleb_Sargeant_JDs_and_Duties.pdf

To Whom It May Concern,

Since 2012 I have worked across a wide range of IT domains, with a strong focus on platform engineering, automation, infrastructure as code, networking and security. I care about building reliable, maintainable systems, and I approach every challenge with a mindset geared towards clarity, consistency and improvement.

My experience spans platform engineering, network security, cloud and hybrid infrastructure, as well as systems automation, scripting and open-source tooling. I have operated in diverse environments, from bare-metal servers to virtualised platforms and cloud-native architectures, delivering solutions that are secure, scalable and maintainable. I am comfortable taking ownership of complex technical problems, whether that involves optimising CI/CD pipelines, designing infrastructure as code, or securing networks and workloads. I value clear, pragmatic communication and enjoy collaborating with colleagues to build systems that meet real-world needs.

You are welcome to explore my website, documentation and GitHub, where you will find practical examples of my engineering approach and problem-solving mindset.

If you have any questions or would like to discuss the role in more detail, I would be happy to connect. Thank you for your time and consideration.

Sincerely,

Caleb Sargeant
